1	Write the following programs: 1. Create, open file and count chars, spaces, tabs, and new lines in a file. 2. Append one file at the end of other. 3. Capitalize the first letter of every word in a file.		
2	Write a program to implement lexical analyzer.		
3	Implement following programs using LEX. 1. Write a LEX program to count number of vowels and consonants in each input string. 2. Write a LEX program to take input from text file and count no of characters, no. of lines & no. of words 3. Write a LEX program to identify whether a given line is a comment or not. 4. Implement all the task done by lexical analyzer.		
4	Write a program to implement DFA for (a+b)*abb		
5	Write a program to check given input string can be derived by following grammar or not. S→Aa | bAc | dc | bda A→d		
6	Write a program to eliminate left recursion from a grammar production. Write a program to perform left factoring on grammar production.		
7	Write a program to find FIRST of given grammar.		
8	Write a program to implement recursive decent parser for following grammar: E→E + T | T T→T * F | F F→id		
9	Write a program to find leading symbol of given production.		
10	Create YACC and LEX specification files to generate a calculator which accepts, integer and float type arguments.		
11	Write a program to convert expression from infix to postfix.		
12	Write a program to read input string from a file and generate three address code.		
13	Write a program to simulate PDA for language having strings with equal number of a's and b's. Write a program to simulate TM for language L = { $a^n b^n c^n$ | n ≥ 0 }.
